

Seizing the AI and automation opportunity

The moment is now

Three out of four CEOs say their competitive advantage rests on generative AI. And the widening gap between early adopters and hesitant businesses is creating a great divide. In response to these dramatic developments, the IBM Institute for Business Value (IBM IBV) has undertaken its most complex, far-reaching study on AI and automation. This report delves into data and preparedness, workforce talent and digital assistants, the IT opportunity, and investment priorities. We also present an 11-point blueprint for optimizing intelligent automation.*

Leaders in generative AI adoption and data-led innovation say they're reaping the rewards.

They report earning 72% greater annual net profits and growing annual revenues 17% more than their competitors.

Expectations are high.

Executives anticipate roughly doubling their revenue growth from AI-enabled automation in their operations in the next three years.

Supercharged AI means supercharged automation.

Almost nine in ten leaders in generative AI adoption (87%) say the technology helps them execute more high-impact automation initiatives.

An overwhelming consensus: benefits outweigh risks.

Eight out of ten respondents (82%) overall agree that benefits from generative AI are worth potential risks.

"We need to get to a golden process—traditional AI and machine learning interacting with generative AI, enhancing forecasting, and providing proactive alerts."

Exploiting AI and automation
